

## Pole Camera Inspection System

PCIS provides safe and easy access to remote areas without the use of time consuming and potentially dangerous ladders or scaffolding, allowing the operator to stay firmly on the ground.

Visual inspections can be viewed, recorded and photos archived on the 10.1 inch, 4K touch screen monitor. The stainless steel camera head features an autofocus, HD, pan and tilt camera, and white light LEDs with variable intensity, not even low light can slow down the inspection. Camera, light, recording and viewing controls on monitor and pole for easy access.

IP68 rating on the camera head allows PCIS to be used in wet, damp, or dusty locations.

- Lightweight, Extendable Carbon Fiber Pole 4.5 - 16.9 feet
- Color, autofocus camera, 304 SS construction, IP68
